

AKSHAYMUNDAYE

PYTHON DEVELOPER

THANE (W) - 400604 | +91 9702176172 | armakshay31@gmail.com

PROFILE SUMMARY

Skilled Python developer with a strong mathematical background and experience in Web development, Mobile development, API development, Data scraping, Automation and SQL. Proven ability to gather requirements from clients, develop implementation strategies and write effective, scalable code. Strong understanding of AWS and experience with S3 buckets. Holds a Bachelor of Engineering degree in Computer Engineering from the Smt. Indira Gandhi College of Engineering (University of Mumbai) with 5.5 CGPA.

EDUCATION

Bachelor of Engineering, Computer Engineering

Smt. Indira Gandhi College of Engineering
(University of Mumbai)

2015-2020

HSC, Maharashtra State Board

VPM KANNADA HIGH SCHOOL & JR COLLEGE

2013-2015

WORK EXPERIENCE

FULL STACK PYTHON DEVELOPER

JULY 2021 - Present

MYRAH CONSULTANCY SERVICES PVT LTD, ANDHERI

Project : Restful Web Service (API's)

- **Project Summary:**

1. worked on a project to develop a REST API for a accounting software.
2. The API was designed to allow users to easily interact with the system through a variety of methods, including creating/editing company profiles, viewing company information, creating/editing invoices & managing inventory.
3. Used a variety of technologies, including Python and MySQL, to build the API and ensure that it was fast, reliable, and easy to use.

- **Key Responsibilities:**

1. Gather requirements from clients to develop API.
2. Create Restful web services using python and django to support client needs.
3. Design and implement SQL databases to store and manage client data.
4. Maintain and troubleshoot client databases and web services as needed.
5. I was responsible for managing the development team, overseeing the implementation of the API, and testing and debugging the system to ensure that it met the needs of the customer.
6. I also worked closely with the customer to understand their requirements and ensure that the API met their needs.

Project : Web Application & Mobile Application

- **Project Summary:**

- 1.I worked on a web application using AngularJS, a JavaScript library for building user interfaces. For mobile application development I used react-native.
- 2.The project involved creating a responsive, user-friendly platform for a users in the accounting industry.
- 3.The main features of the web/mobile application included a dashboard, trial balance page and one click filing of GST.
- 4.The dashboard was designed to show graphical analysis of credits and debits of company.

- **Key Responsibilities:**

- 1.I was responsible for the front-end development of the web application, using AngularJS to create reusable components and manage the state of the application.
- 2.I also implemented responsive design to ensure that the web application looked great on all devices.
- 3.I was also responsible for the front-end development of the mobile application, using react-native.
- 4.Keeping up-to-date with the latest developments in the React Native ecosystem, and staying informed about new tools and technologies that can improve app development.
- 5.Continuously test and maintain the app for different mobile devices and platforms.

SKILLS

- | | |
|------------------|---|
| • Python, Django | • AngularJS, React-Native |
| • SQL | • Automation (Selenium) and Web Scrapping |
| • RESTful API | • Data analysis and visualization libraries |
| • JavaScript | such as NumPy, pandas, and Matplotlib |
-
